MEMORANDUM FOR: The President  
 FROM

: George Bush  
 Director

SUBJECT

: Status of the Soviet Program of  
 Dismantling ICBM Launchers

1. This memorandum reviews, on the basis of photography through 22 February, the status of our knowledge of Soviet progress in dismantling 51 ICBM launchers by 1 March as required under the terms of the Interim Agreement. It also estimates how long it would take for these launchers to be restored to operational condition. The options available for additional photographic coverage of the ICBM launchers are also discussed.

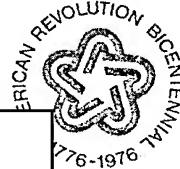

Status of the Dismantling Program

2. Under the terms of the Interim Agreement the Soviets were obligated to have dismantled 23 ICBM launchers by 23 January and a total of 51 ICBM launchers by 1 March. We are virtually certain that the Soviets did not meet their 23 January obligation, but are less certain of the extent to which they met their 1 March obligation.

3. On the basis of high-quality photographic coverage, the status of the dismantling program as of 23 January was as follows:

-- Eight ICBM launchers were completely dismantled. It would take two months to restore these launchers to an operational status, the same period it would require to build a new soft site for an SS-7 or SS-8 launcher.

Copy No. 4

**TOP SECRET**

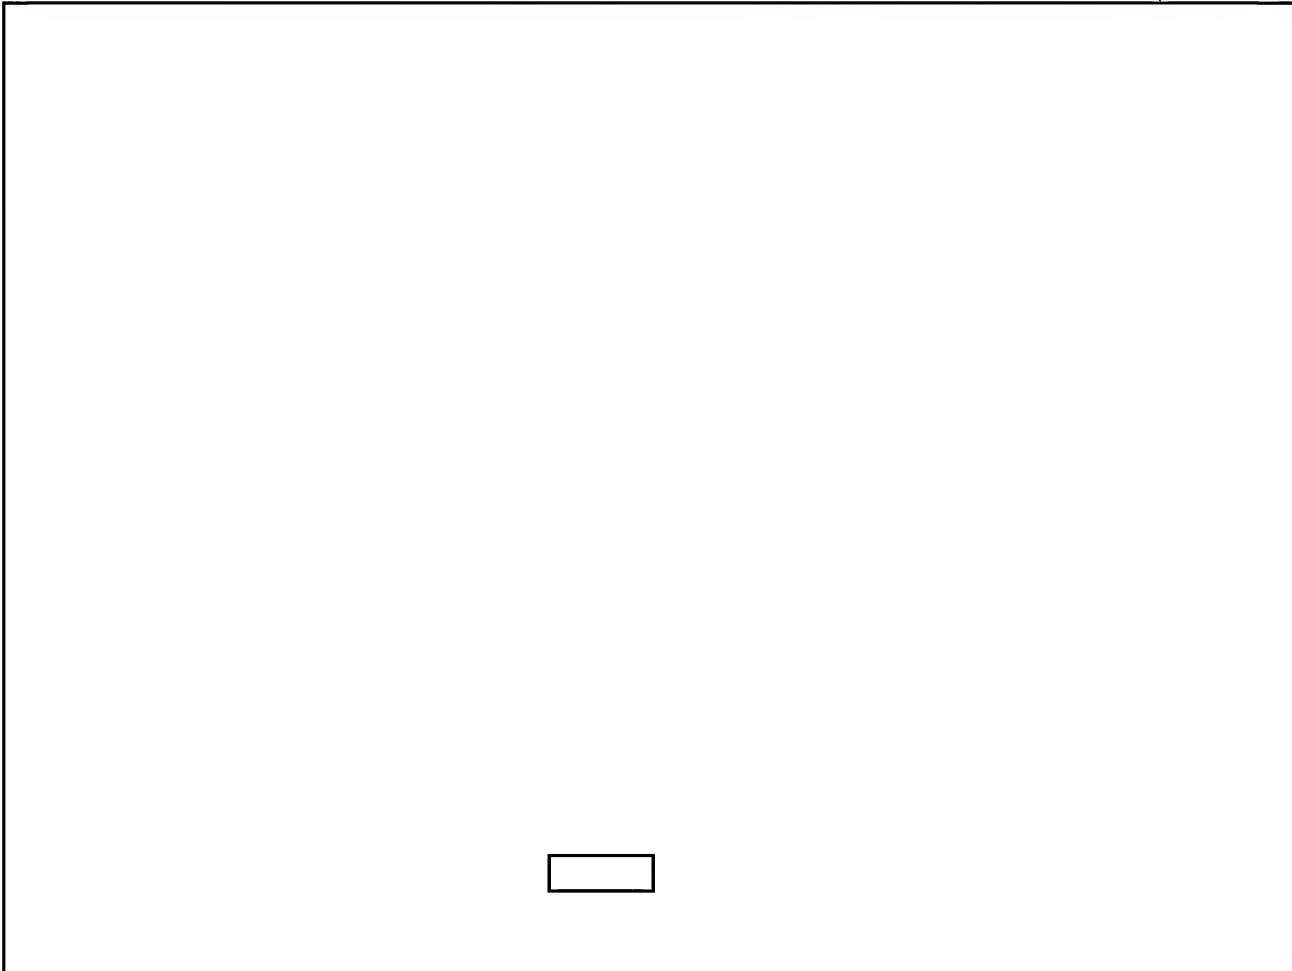

- Twenty-two of the ICBM launchers were at sites where, in addition to the removal of missiles and transportable equipment, propellant tanks or control bunkers were completely or partially torn down. These launchers could be restored in about two months.
- Twelve launchers were at sites where only the missiles and transportable equipment were removed. These launchers could be returned to an operational status in less than a month.
- Nine of the launchers are at sites where the control bunkers have been partially excavated, and four silos have had some components removed. It would take one to two months to make all nine launchers operational again.
